

## GOING GREEN! EARTH DAY! APRIL 22, 2008

Over a Year ago, Dollar Wise Quality Cleaners designed and manufactured its own 100% Environment Friendly Laundry Detergent, ZOP. Our detergent has no phosphates and is carcinogen free. We are cleaning approximately 2,000 shirts a day along with comforters and other products. Zop's cleaning power has proven its strength time and time again. ZOP removes stains that previously required chemicals and aggressive treatments and leaves the clothes smelling clean & fresh.

This April 22<sup>nd</sup>, Dollar Wise Quality Cleaners is converting the dry cleaning side of its operations to an Aqueous solvent called DRYSOLV. The principal component of DRYSOLV is n-Propyl Bromide. (n-Propyl Bromide has been shown to neither deplete the ozone layer nor contribute to global warming). Its cleaning power is stronger than the solvent used today. Less energy is required as the cleaning times are shorter and the temperatures are lower. This benefits clothing; Less agitation, less expansion and contraction of fibres.

The most common source of odor in clothing is the build up of fatty acids. DRYSOLVS composition and volatility allows these odors to evaporate quickly and not remain in your clothing.

We are excited about this endeavor, for our customers, the environment and our business.
